Help Create Our Expert Database

Project Title	Help Create Our Expert Database
Summary	The internship will include working with National Institute of Standards and Technology (NIST) data scientists to implement a Natural Language Processing (NLP) tool to create and maintain an experts database.
Country	United States

Project Description

You will have the opportunity to work with NIST experts in Natural Language Processing and communication to create a tool to connect scientific resources with National needs. Through this internship, you will get a look behind the scenes at how NIST, the Nation's national metrology institute, operates. The work will result in a product that dramatically improves NIST's ability to innovate and serve our stakeholders.

Applicants should be comfortable with programming and building web interfaces, or with quickly learning new technology platforms. This opportunity will also enable scientists and engineers to learn more about scientific careers in the Federal government.

Required Skills or Interests

Skill(s)

Data analysis
Design thinking
Software development
Website design
